Package information

Comes assembled

Number of seats: 1 piece

Width: 850 mm

Depth: 850 mm

Height: 570 mm

Weight with packaging: 6 kg

The UNI bean bag chair made of 3D mesh is our joint development with the Stas Litvinov Studio workshop. It expresses the spirit of simplicity and spontaneity. The bean bag chair is made of original fabric, has a friendly appearance and a playful design.

Its soft shapes look naturally comfortable. The outer case is made of high-tech, artificial 3D mesh. Breathable, quick-drying textiles without unpleasant odors, resistant to mildew. The inner cover is made of stretch nylon, a lightweight and tear-resistant material. The filler consists of a special proportion of two components: elastic holofiber fibers and mini-granules of polystyrene foam, capable of adapting to the body and sitting position. These are environmentally friendly and hypoallergenic materials.

Year of creation 2019

Height: 545 mm

Width: 900 mm

Depth: 900 mm

Materials and instructions

Bean bag chair: removable cover: 3D mesh textile, polyester. Inner cover: stretch nylon. Filler: a combination of holofiber fibers and mini-granules of polystyrene foam.

Care: to keep the fibers and pillow filled with air, it needs to be shaken from time to time. Vacuum the outer cover regularly with the brush attachment. Fresh dirt should be blotted immediately with a clean absorbent cloth, then removed with soapy water. Can be cleaned in a washing machine on delicate cycle. The maximum load on the product is 150 kg. Do not iron. Do not use the product without an outer cover. Keep children away from the open inner cover; the filler may spill out. Over time, the bean bag chair shrinks. It is recommended to add material once every three years. Service life: 5-10 years.
